

QU-5 / QU-5D

Rack Ear Fitting Guide

Introduction

The **QU-5-RK19** Rack Kit enables mounting of the Qu-5 or Qu-5D in a standard 19" rack.

A minimum **11U** of rack space is required, with the rear panel of the mixer left free for connections. Allow for adequate ventilation around the mixer when mounting and do not impede airflow to the fan located on the underside.

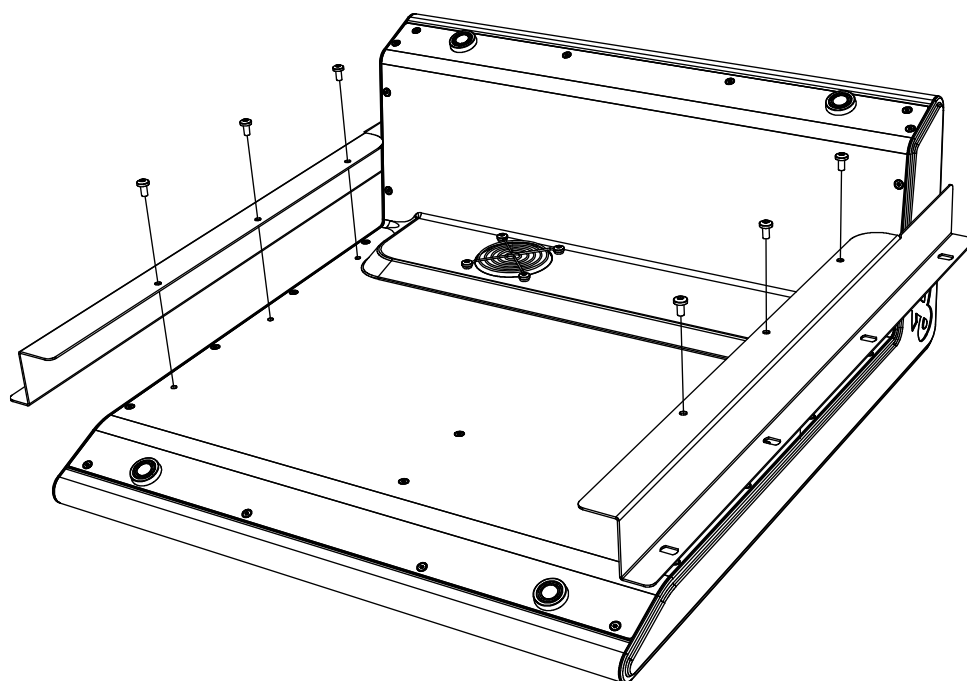

Use only the supplied fixings to attach the rack ears to the Qu. Using other fittings may cause damage to the unit or ears.

Supplied with **QU-5-RK19**:

- 2x Rack Ears
- 6x M4x8 Torx® fixings

Attaching the ears to the Qu-5 or Qu-5D

1. Place the Qu face down on a padded surface, taking care not to place pressure on the faders or encoders.
2. Line up the rack ears with the unused screw holes at either side of the mixer – noting that each will only align correctly to one side.
3. Secure each rack ear using three of the provided M4 Torx® screws.
4. Turn over the mixer and attach the ears to rack rails using all 8 available fixing points.
